

Table Reader — quick guide

Turn a scan or photo of a table into a spreadsheet (CSV) you can open in Excel.

1 Open it and add your files

Double-click **Table Reader** on your desktop. The first time, press **Sign in** (top of the page) and finish signing in to your Claude account in the browser window that opens.

Drag your **PDF, JPG or PNG** files onto the box, or click it to choose them. You can add several at once.

2 Wait while it reads

Each page takes about **15 seconds to 1 minute**. The page shows “Reading page 2 of 5...”. You can keep working and add more files.

Changed your mind? Press **Cancel reading**. Pages already read are kept, and **Continue reading** picks up where it stopped.

If it stops because your Claude plan is used up for now, wait until it resets, then press **Continue reading**.

Where are my files?

Everything stays on this computer in **Documents** → **Table Reader**. Recent files are listed on the start page.

3 Check the yellow cells

The original page is on the left and the table on the right. Table Reader **never guesses**: when it is not sure about a cell, it leaves the cell empty and turns it **yellow**, with the reason and what it saw.

- **Type** the right value and press **Enter**.
- **Use this** — accept what Claude saw (check it first; ? marks letters it could not read).
- **It's empty** — the cell really is blank.
- **Undo my change** brings back the original reading.
- **Go to next cell to check** jumps to the next yellow cell.
- Any cell can be corrected, not only yellow ones. Read “Claude’s notes” above the table too.

4 Download the CSV

Press **Download CSV**. Open the file in Excel. Your corrections are included. Any **yellow** cell you did not fix is left **blank** in the CSV and explained in the **Notes** column, so nothing uncertain looks certain. Each form field (such as Name or Month) is repeated on every row, and a **Page** column shows which page a row came from.

For Million Payroll: press **Payroll** at the top. Choose the month, mark the rest days and public holidays, add each employee (their Employee No.) and tick their time-card files. Table Reader works out days worked and overtime from the cells you checked, lists anything it could not work out, and lets you type over any figure. Then **Download payroll CSV**.

If something goes wrong

- **“Not signed in”** → press **Sign in** at the top, then **Continue reading**.
- **“Claude Code is not installed”** → ask your IT person to install Claude Code and sign in.
- **Page too blurry or dark** → take the photo again in good light, or scan it.
- When you finish, press **Quit Table Reader** (top right). Anything else → tell your support person.
- Always compare a few cells with the original page: Claude reads handwriting well, but not perfectly.
